

### NO PANIC DRAPE

Drape produced in nonwoven spunlaced water-repellent antistatic blue fabric for oral surgery.  
 Drape with triangular hole, with adhesive trat allows it to be fixed to the patient's chin , transparent no panic window, as it allows the patient to communicate with the surgeon through the transparent window that leaves the eyes free.  
 Disposable sheet folded in such a way as to guarantee the maintenance of sterile field and a fast drape.

**TECHNICAL FEATURES:** Dimensional tolerance  $\pm 5\%$

- Total dimensions of the drape : 133x200 cm
- Triangular hole 11x10 cm positioned approximately 45 cm from the upper side
- Adhesive 15x4 cm for fixing to the patient's chin
- Transparent window 13x4,5 cm positioned above the triangular hole with a 2 cm thick sponge in the upper part for positioning on the patient's nose in the lower part.
- 2 velcro hose clamps

**PRODUCTION:**

The product is produced and packaged in a special **clean room with a controlled environment**

**CLEAN ROOM ENVIROMENT:**

ISO class 8 - UNI-EN ISO 14644-1 standard.

Constant temperature and humidity environment maintained by ventilation and filtering systems that also allows to keep the bioburden at low levels.

**PACKAGING:**

Sterile drape, packed in bag for sterilization with peel-open opening and sterilization indication, packed in cardboard boxes.

**STERILIZATION:**

Sterilization is carried out with ethylene oxide; the sterilization process is regularly validated and kept under constant control by routine analysis; and the residue of the sterilizing gas is kept within the limits established by the current legislation. Sterilization is performed by a specialized laboratory.

**SHELF LIFE :**

The validity of the sterile device is 59 months from the sterilization date (MONTH-YEAR). The expiration date indicated refers to the device in its intact and correctly stored package.

**QUALITY CONTROL:** ALLE has implemented a Quality Management System which complies with the following standards:

- **EN ISO 13485**

**GENERAL PRECAUTIONS AND WARNINGS:**

The device must be used only by qualified and trained personnel. Read the information reported on the label.

**LABELLING:**

Each individual package is provided with an internal label visible through the transparent packaging; this label is complete with all the information necessary to identify the product:

- trade name of the product
- product code number
- manufacturer's name
- production batch number
- expiry date
- single-use symbol
- production area
- CE marking
- warnings

There is an adhesive label on the transport packaging bearing all the information required to identify the product as indicated above and the no. of kits per pack

**STORAGE:**

- The items are stored in the original cardboard boxes, in a closed and clean environment protected from sunlight
- The integral sales package is guaranteed impermeable to direct and indirect light sources.

**PRODUCT DISPOSAL:**

The device listed in this document can be disposed of as non-hazardous waste in authorized plants, including incineration, in accordance with current regulations.

However, if the device used during surgical procedures in the operating room is exposed to contact with the patient's biological fluids, it must be treated and disposed of as hospital waste.

**LATEX AND PHTHALATE-FREE:**

- The device does not contain natural rubber latex (Latex free)
- The device does not contain phthalates (PVC free)
- The device does not contain elements (adhesives, chemicals, etc.) that could cause allergies or any skin reaction.

<b>TECHNICAL SPECIFICATIONS OF THE MATERIALS</b>			
<b>SPUNLACE NON WOVEN FABRIC</b>			
Non Woven Spunlace Softesse <sup>®</sup> – DuPont <sup>™</sup> Medical Fabrics is made with 55% woodpulp and 45% polyester. This non-woven fabric is treated with water-repellent substances that serve to form a barrier to blood and alcoholic solutions. The T.N.T. Softesse is made up of tightly woven fibers that do not allow bacteria to penetrate but allow the free circulation of air; it is soft, drapeable and has good dry and wet resistance. The fact of being disposable avoids cross contamination.
